

Create a webpage for me where the user can write an AI prompt into a text field.

Then the program creates a link from that text entry. The link should read:

Here is a simple, single-file HTML webpage that does exactly what you need. It captures the user's text, replaces spaces with `+` signs, and generates the clickable ChatGPT prompt link dynamically as they type.

## The Webpage Code

### HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>ChatGPT Prompt Link Generator</title>
</head>
<body>
  <div class="container">
    <div class="label">
      <div class="text">
        <input type="text" value="" />
      </div>
      <div class="button">
        <button>Generate</button>
      </div>
      <div class="link">
        <a href="https://chatgpt.com/prompt/<input type="text" value="" />+</a>
      </div>
    </div>
  </div>
</body>
</html>
```

```

        border: 1px solid #ccc;
        border-radius: 4px;
        box-sizing: border-box;
        resize: vertical;
        font-size: 16px;
    }
    .result-box {
        margin-top: 20px;
        padding-top: 20px;
        border-top: 1px solid #eee;
    }
    a {
        color: #10a37f;
        text-decoration: none;
        word-break: break-all;
        font-weight: 500;
    }
    a:hover {
        text-decoration: underline;
    }
    .placeholder {
        color: #888;
        font-style: italic;
    }
</style>
</head>
<body>

<div class="container">
    <h2>ChatGPT Link Generator</h2>

    <label for="promptInput">Type your AI prompt:</label>
    <textarea id="promptInput" placeholder="e.g., Explain quantum physics like I am f

    <div class="result-box">
        <strong>Your Link:</strong>
        <div id="linkContainer" class="placeholder">Your generated link will appear h
    </div>
</div>

<script>
    const promptInput = document.getElementById('promptInput');
    const linkContainer = document.getElementById('linkContainer');

    promptInput.addEventListener('input', function() {
        const text = promptInput.value.trim();

        if (text === '') {
            linkContainer.innerHTML = 'Your generated link will appear here...';

```

```

        linkContainer.className = 'placeholder';
        return;
    }

    // Replace all spaces (including multiple consecutive ones) with '+'
    const formattedPrompt = text.replace(/\s+/g, '+');

    // Target URL
    const finalUrl = `https://chatgpt.com?prompt=${formattedPrompt}`;

    // Update the container with a clickable anchor tag
    linkContainer.className = '';
    linkContainer.innerHTML = `<a href="${finalUrl}" target="_blank">${finalUrl}<
    `);
</script>

</body>
</html>

```

## How to use this:

1. Copy the code block above.
2. Paste it into a plain text editor (like Notepad or TextEdit) and save the file as `index.html`.
3. Double-click the saved file to open it in any web browser.

## How the logic works:

- `\s+` **Regular Expression:** Instead of just replacing single spaces, using `/\s+/g` ensures that if a user accidentally hits the spacebar twice, or adds a line break (tab/enter), it collapses them cleanly into a single `+` sign.
- `target="_blank"`: This attribute is added to the generated link so that when you click it, the ChatGPT prompt opens up cleanly in a brand-new browser tab.

Can you add a button that copies the link into the clipboard

Here is the updated code. I have added a "Copy Link" button right next to the generated link. It uses the modern web Clipboard API to copy the link seamlessly and gives a quick visual "Copied!" confirmation when clicked.

## The Updated Code

### HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>ChatGPT Prompt Link Generator</title>
  <style>
    body {
      font-family: -apple-system, BlinkMacSystemFont, "Segoe UI", Roboto, sans-
      max-width: 600px;
      margin: 40px auto;
      padding: 0 20px;
      color: #333;
    }
    .container {
      background: #f9f9f9;
      padding: 25px;

    linkContainer.className = '';
    linkContainer.innerHTML = `<a href="${generatedUrl}" target="_blank">${genera
    copyBtn.disabled = false;
  });

  copyBtn.addEventListener('click', async function() {
    if (!generatedUrl) return;

    try {
      // Modern Clipboard API
      await navigator.clipboard.writeText(generatedUrl);

      // Visual feedback loop
      const originalText = copyBtn.innerText;
      copyBtn.innerText = 'Copied!';
      copyBtn.style.backgroundColor = '#2e7d32'; // Green success color

      setTimeout(() => {
        copyBtn.innerText = originalText;
        copyBtn.style.backgroundColor = ''; // Revert back to CSS default

```

```
    }, 2000);

    } catch (err) {
      console.error('Failed to copy text: ', err);
      alert('Oops, unable to copy automatically. Please copy the link manually.
    }
  });
</script>

</body>
</html>
```

## What changed?

- `navigator.clipboard.writeText()` : This securely copies the generated string to the user's clipboard layout.
- **State handling:** The button starts out as `disabled` (greyed out) and dynamically unlocks the moment the user types a valid character.
- **UX Feedback:** When you press the button, it flashes "Copied!" for 2 seconds so the user knows the action was successful without guessing.
